## There are many benefits to preventive maintenance and servicing of material drying plants

- Fewer items must be discarded due to drying errors.
  - Fewer downtimes and shorter downtime.
- Scheduled maintenance is cheaper than emergency repair, therefore lower service costs.
- The life of the equipment is extended.
  - Assurance of the quality of the items produced.
  - Fewer or no emergencies for emergency repairs.
  - Increased customer satisfaction because dryer-related quality defects are avoided.
  - Material waste is reduced.
  - The total operating costs for the drying processes decrease.
  - Updated service report.

## PROPER DRYING IS ESSENTIAL

If a material dryer does not work properly, it will affect production. Regardless of the type, make or technology, the material dryer must provide with the parameters required for each individual plastic material: supply air temperature, return air temperature, dew point for the air, the amount of air (flow), etc. If there are deviations and the degree of drying prescribed by the material supplier is therefore not complied with, it goes beyond the item quality.

It is difficult to check this status on a daily basis as it requires measuring equipment and expertise.

Andertech offers this expertise through fixed, ongoing service agreements on favorable terms. We already have this type of agreement with many of our customers.

In our service car, we bring all the necessary equipment, including desiccant, should it need to be replaced.

Finished items are difficult to quality test for anything other than surface defects. However, the critical parameter is often the mechanical strength of the items. The strength can be guaranteed with a properly dried raw material. With a properly functioning material dryer, you can therefore in good conscience promise your customers a proper quality.

## WE SERVICE ...

- MAGUIRE DRYER
- SOMOS DRYER
- VISMEC DRYER
- PLASTIC SYSTEM DRYER
- MOTAN DRYER
- MORETTO DRYER
- LABOTEK DRYER
- SHINI DRYER
- CONTINATOR DRYER
- KOCH DRYER
- COLORTRONIC DRYER

## ... IN BRIEF EVERYONE!

After each service review, we provide a detailed written service conclusion, which the customer can use in its quality assurance and in its marketing to end customers

## SERVICE OF 50 DRYERS COLLECTED IN ONE PLACE

plastic and perfection  
**HN GROUP**

- We have 50 dryers of 8 different makes. I can have them serviced at once by one man from Andertech. It could not be easier, says Kim Sørensen, purchasing manager at HN Group. The company, which has 80 employees, is located in Billund and supplies injection molding, thermoforming and casting tools to a large number of industries, including medico, food and energy. HN Group has an injection molding department with 52 robot-automated production cells and a thermoform department with five production lines.

Then the equipment runs optimally again and I do not have to think about service until the next time he looks past. This is how it has been for almost 5 years and I am very satisfied with that, Kim Sørensen explains.

HN Group supplies, among other things, companies within toys, electronics, water technology, automotive and audio.

” - I have it all together at Andertech. They send a man every six months. It could not be easier.

“ - Our dryer must be serviced every six months. It is advisable to have Andertech service them all at once, instead of having a service agreement with 8 different companies. Now I have it all together at Andertech and they send a man every six months. He spends about two days going all drier through. Then he makes a list of the things to look at and we get things put in order at once.
